

Atison's Betta SPA

Wild almond leaf extract, and a lot more, in one easy formula. Clean, easy, complete and consistent. For the first time, available for the Betta hobbyist in an easy-to-use format.

- The Wild Almond leaf extract will create a more natural environment for the Betta fish. The leaves contain humic acids and tannins and are known to have antibacterial properties.
- Contains Yucca extract that will bind the ammonia (NH₃) in the water.
- Contains calcium needed to activate the muscles and to develop strong bones, teeth and scales.
- Lowers the pH of the water and absorbs harmful chemicals.
- Adds essential trace elements to the water.
- Ideal for conditioning the Betta, promotes spawning, activity and colors.
- Colors the water via natural tannins, lignins and fulvic acids.
- Will make the bubble nest stickier.
- Produced with natural ingredients.
- Recommended for all fish that prefer tannin stained black-water streams, the natural habitat of the Betta.
- Recommended for all freshwater fish kept in small containers without filters, especially during transportation.

The Wild almond tree is also known as Terminalia Catappa, Amandier de Cayenne, Badamier, Huu kwang, Indian almond, Java almond, Ketapang, Kobateishi, Tropical almond, Sea almond, etc. The SPA comes in a very practical 125 ml. and 500 ml. bottle.

Mr. Atison Phumchoosri is recognized worldwide as one of the most respected Betta breeders. By combining Mr. Atison's unrivaled experience in breeding Betta fish and our unique know-how in developing high-end feeds, we have developed the Atison's Betta Products. Using Mr. Atison's vast testing grounds, we were able to determine that this product range specifically meets the needs of the Betta species. To learn more about Mr. Atison, visit www.atisonbetta.com.

The Atison Betta product range is a unique approach as Ocean Nutrition has developed a complete feeding regime and a very specific water conditioner for perhaps the most beautiful of all ornamental fish. With these products, we have made it easier to keep, breed and raise the Betta in excellent conditions; everything that is needed has been provided. We sincerely hope this product range will contribute to bring the magnificent hobby of keeping Betta within reach of an even broader public.

Atison's Betta Food

High-end daily food for the Betta.

- High quality floating pellet food using the freshest ingredients available.
- Developed to produce the most nutrient complete food for the Betta species.
- Will enhance the natural color of the fish.
- Does not cloud the water.
- Extensive tests have proven this food to be ideal for the care of the Betta fish.

Available in a handy 75 g container or a very attractive 15 g packaging.

Atison's Betta PRO

The perfect replacement of live food.

Ideal for the growth and conditioning of the Betta Fish. This food is a totally new concept and can not be compared with any existing pellet food. Bettas love it.

- Floating pellets which do not cloud the water.
- Natural attractants ensure prompt acceptance.
- Higher survival rate than using live food.
- Bettas will be more alert and responsive.
- Fins and scales grow stronger and last longer.
- Enhances the natural color of the Betta.
- Ideal nutritional value. No colorants added.
- Ideal for the growth and conditioning of the Betta

This food is intended for use by Betta breeders – both the serious hobbyists and the professionals. It is safer, more reliable and cheaper than live food and is of course easier to store and handle. To cater to all users, it is available in a handy container of 75 g or a very attractive 15 g packaging for the hobbyist and in an easy-to-use 500 g alufoil pack for the professional breeder. We advise the use of Betta PRO in case you want to condition your Betta (before breeding or before participating to a show) or for sustained growth. Give as staple food to the fry from the start of the second month up to the seventh month. Bettas love this food and prefer it to frozen or freeze-dried foods.

Atison's Betta Starter

Top performance larval fish diet with high digestible energy. To be used from day 3 to the end of the first month.

- Nutritionally complete food for young Betta fish that will help promote fast growth, optimal development and disease resistance.
- High protein content. No inclusion of terrestrial animal proteins.
- High HUFA and phospholipid content. High DHA/EPA ratio.
- Highly attractive for the fry.
- Excellent water stability with reduced sediment in the tank.
- Free-flowing floating crumbles.
- Contains vitamins A3, D3, E and C.

Finally, breeding the Betta made easy. This food has been extensively tested and is the easy way to raise your fry. It comes in a very attractive package that contains the small food container with a handy spoon and a very extensive explanation by Mr. Atison on how to best breed and raise the Betta fish. Fry raised with a combination of Betta Starter for the first month and Betta PRO after that have outperformed any other feeding regimes in terms of survival rate of the fry and size of the adult Betta. The Bettas grow bigger but do not get fat. The Betta starter comes in a nice box containing a small bottle with 12 g of larval fish diet, a small spoon and a clear instruction on how to breed Bettas using Ocean Nutrition products.
